Abstracts

Preclinical imaging is the visualization of living animals for research purposes, such as drug development. Imaging modalities have long been crucial to the researcher in observing changes, either at the organ, tissue, cell, or molecular level, in animals responding to physiological or environmental changes. Imaging modalities that are non-invasive and in vivo have become especially important to study animal models longitudinally. Broadly speaking, these imaging systems can be categorized into primarily morphological/anatomical and primarily molecular imaging techniques. Techniques such as high-frequency micro-ultrasound, magnetic resonance imaging (MRI) and computed tomography (CT) are usually used for anatomical imaging, while optical imaging (fluorescence and bioluminescence), positron emission tomography (PET), and single photon emission computed tomography (SPECT) are usually used for molecular visualizations.

Scope of the Report:

This report focuses on the Preclinical Imaging in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In 2018, the global preclinical imaging market is expected to be dominated by North America. A number of factors such as robust R&D infrastructure for life science researches, fast adoption of novel molecular imaging technologies, significant presence of pharmaceutical and biotechnology companies, and increasing preference of end users for multimodality systems are driving the growth of the preclinical imaging market in the North American region. The Asia-Pacific market is expected to grow at the highest CAGR from 2018 to 2023. This is primarily due to the continuous government

support for pharmaceutical and biotechnology R&D, increasing public-private investments to support radioisotope production, rising number of translational research activities, and evolving regulatory scenario across major Asian countries.

The worldwide market for Preclinical Imaging is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
