Preclinical Pharmacokinetics Services refer to professional technical services tailored for drug R&D, focusing on studying the absorption, distribution, metabolism, and excretion (ADME) processes of candidate drugs in preclinical experimental systems (in vitro, in vivo, ex vivo) as well as the dynamic changes of drug concentration in biological matrices over time; relying on GLP-compliant laboratories, specialized detection platforms (e.g., LC-MS/MS) and standardized experimental protocols, these services conduct tests on experimental animals (rats, mice, dogs, monkeys, etc.) or in vitro models (liver microsomes, Caco-2 cells), including sample collection, pretreatment, quantitative detection, and data modeling analysis, to clarify core PK parameters (bioavailability, half-life, clearance rate, volume of distribution, etc.), reveal the drug's disposition rules in organisms, and provide critical data support for candidate drug screening and optimization, dosage form design, toxicology study matching, and rational transition to clinical trials, helping drug R&D institutions reduce R&D risks, improve R&D efficiency and ensure the scientificity of subsequent research layouts.
