The global Preclinical Toxicology Testing Service market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The global preclinical toxicology testing services market is significant and has experienced steady growth in recent years. It is driven by the continuous development of new pharmaceuticals, chemicals, and medical devices, as well as increasing regulatory scrutiny. The United States is a major hub for preclinical toxicology testing services, with a well-established pharmaceutical and biotechnology industry. Regulatory requirements from the FDA drive the demand for toxicology testing. Countries within the European Union also have significant demand for preclinical toxicology testing due to the robust pharmaceutical industry. Regulatory bodies like the European Medicines Agency (EMA) require safety assessments for market approval. The Asia-Pacific region is experiencing substantial growth in preclinical toxicology testing services, particularly in countries like China and India, where the pharmaceutical and chemical industries are expanding rapidly.

Preclinical Toxicology Testing Services are a set of laboratory and research services conducted to assess the safety and potential toxicity of new drugs, chemicals, medical devices, or other substances before they are tested in humans in clinical trials. These services are an essential part of the drug development and regulatory approval process and are typically required by regulatory agencies, such as the U.S. Food and Drug Administration (FDA) and the European Medicines Agency (EMA), to ensure the safety and efficacy of new pharmaceutical and chemical compounds.
