According to our (Global Info Research) latest study, the global Predictive Adaptive Cruise Control (PACC) market size was valued at US\$ 221 million in 2024 and is forecast to a readjusted size of USD 487 million by 2031 with a CAGR of 11.9% during review period.

Predictive Adaptive Cruise Control (PACC) is an advanced driver-assistance system that combines adaptive cruise control (ACC) with predictive technology to enhance vehicle efficiency and safety. Unlike traditional ACC, which maintains a set following distance and speed based on real-time sensor inputs, PACC integrates data from GPS, digital maps, and traffic patterns to anticipate road conditions such as curves, hills, or speed limit changes. By adjusting speed proactively, PACC improves fuel efficiency, reduces wear on braking systems, and enhances overall driving comfort while maintaining safety. This technology is commonly used in modern vehicles to offer a smoother and more intuitive driving experience.
