Abstracts

A predictive dialer is a type of automated dialer that places phone calls even before the agents become available. It's designed to increase agents' efficiency by calling as many leads as possible. The system quickly moves on to the next lead after an unanswered call. Calls answered, on the other hand, are quickly routed to the next available agent. This guarantees more productive talk time, ensuring improved productivity for the call center.

An auto-dialer is a contact center tool that makes the agent's life easier by removing the need for manual dialing. It systematically dials phone numbers and connects the call to the agent if someone picks up their phone. A predictive dialer, on the other hand, is a type of auto dialer that aims for a higher calling rate by trying to connect to as many customers as possible. It will do this by dialing multiple phone numbers at once then automatically connects answered calls to the next available agent.
