Predictive maintenance is the data-driven approach to predicting the failure of operational equipment and implementing preventative maintenance to avoid unplanned downtime. It leverages a wealth of data gathered from in-vehicle sensors, past service records, and machine learning techniques to analyze various equipment conditions that could potentially lead to a potential system/equipment failure. AI system then notifies the user and the automobile manufacturer/maintainer that a certain component or system requires maintenance or replacement.

This approach minimizes the cost of unscheduled maintenance while maximizing the component’s lifespan, allowing us to get more value out of a part.

Furthermore, AI-powered quality control systems can be enabled to detect possible defects in components before they get installed.
