Abstracts

Prefabricated Busbar System is the is a system of distributing electric power using copper or aluminium busbar with suitable enclosures and good amount of protection to prevent the cables from getting damaged due to foreign bodies. The busbar trunking system is a high-current trunk detachable power system, usually composed of a metal casing (iron or aluminum), conductors, insulating materials and related accessories. The busbar trunking system was first born in the United States, and after it was put into practical application in Japan, it has sprung up in developed countries and regions. In recent years, with the large-scale construction of infrastructure, the demand for electricity is also increasing, and the busbar trunking system has gradually become the standard power supply method for industrial factories, high-rise buildings, commercial complexes, rail transit and other places.
