Abstracts

The global Preformed Fittings for Optical Cables market size is expected to reach \$ 646 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Preformed Fittings for Optical Cables are helical hardware assemblies used for the installation, anchoring, suspension, protection and vibration control of OPGW, ADSS, OPSC and selected aerial optical-fiber cables. They are composed of preformed rods, structural reinforcing rods, armor rods, dead-end rods, suspension rods, spiral vibration dampers and related connection hardware. By distributing clamping force over a long helical contact length, these fittings reduce localized crushing, jacket damage, fiber-unit stress and fatigue under wind, ice, long-span and high-electric-field operating conditions. Major upstream inputs include aluminum-clad steel wire, galvanized steel wire, aluminum-alloy wire, stainless steel, zinc-aluminum coatings, elastomeric inserts, engineering plastics and steel connection hardware. Downstream applications include transmission-line communications, dispatch automation, relay protection, substation communication, renewable-energy export lines, distribution fiberization and grid refurbishment.

In 2025, global preformed fittings for optical cables production reached approximately 8 million units, with an average global market price is \$50 per unit.
