## Abstracts

According to our (Global Info Research) latest study, the global Pregelatinized Starch (?-Starch) market size was valued at US\$ 1968 million in 2025 and is forecast to a readjusted size of US\$ 2480 million by 2032 with a CAGR of 3.4% during review period.

Pregelatinized starch is a physically modified starch that has already been cooked and dried so that it can hydrate, swell, thicken or bind in cold water without a conventional cooking step, making it important for instant viscosity, dry-mix convenience, tablet binding, feed durability and industrial adhesion.

Upstream supply of Pregelatinized starch depends mainly on maize, tapioca, potato, wheat and other botanical starches, plus wet milling, slurry handling, drum drying, spray cooking, extrusion and powder packing capacity. Raw-material economics are therefore linked to grain and tuber harvests, energy cost, water treatment, food safety control and regional starch-processing infrastructure. Downstream buyers include food processors, pharmaceutical excipient users, aquafeed and animal-feed producers, paper and corrugated board plants, dry-mix construction material producers, oilfield chemical formulators and specialty industrial processors. Procurement is usually handled through annual framework agreements for large food and feed users, approved-supplier lists for pharmaceutical excipient customers, distributor-assisted supply for smaller regional processors, and project or batch purchasing for oilfield, construction and other industrial uses.

In the current market, global production of Pregelatinized starch is around 1,125,000 Metric Ton, with an average selling price of about 1,700 USD per Metric Ton EXW basis. The market is fragmented because pregelatinized starch is not one single

technical grade. High-volume food and industrial grades are priced close to modified starch economics, while pharmaceutical excipient grades carry a much higher value per tonne because of tighter documentation, pharmacopeial compliance, batch traceability, microbial control, heavy-metal control and customer qualification. A representative industry gross margin estimate is 27.5 percent. The margin is supported by application know-how, validated product consistency, access to stable starch feedstock, drying technology, customer formulation support, food safety systems, pharmaceutical documentation and technical service rather than by patent exclusivity alone. Top 5 suppliers control approximately 23 percent of global revenue CR5, while the Top 10 suppliers control approximately 36 percent. Demand is concentrated in China, North America, Europe and the broader Indo-Pacific region because those regions combine large food processing, pharmaceutical excipient, feed, paper and construction material demand with established starch-processing supply chains.

From 2026 to 2032, demand should grow steadily rather than explosively. Food processors will continue replacing cook-up starch systems with instant, clean-label or cold-process textures where the cost-in-use is justified. Pharmaceutical excipient demand should grow with solid oral dosage production, especially where local pharmacopeial documentation and substitution of imported excipients are supported by regulatory systems. Feed and aquaculture demand should remain tied to pellet durability, binder performance and protein-feed formulation trends. Industrial demand will be supported by paper, gypsum board, dry mortar, briquetting, foundry and oilfield applications, but these segments are more price-sensitive and exposed to substitution by cellulose ethers, synthetic binders, gums or other modified starches. Carbon constraints and energy costs matter because pregelatinized starch relies on cooking and drying operations. AI will have a limited but practical role in formulation optimization, quality prediction, moisture control and customer application support. The key bottlenecks are stable low-cost starch feedstock, drying capacity, consistent cold-water viscosity, microbial control for food and pharma grades, and the ability to provide audited documentation for regulated users.
