Abstracts

Preimplantation genetic testing is a technique used to identify genetic defects in embryos created through in vitro fertilization (IVF) before pregnancy. Preimplantation genetic diagnosis (PGD) refers specifically to when one or both genetic parents has a known genetic abnormality and testing is performed on an embryo to determine if it also carries a genetic abnormality. In contrast, preimplantation genetic screening (PGS) refers to techniques where embryos from presumed chromosomally normal genetic parents are screened for aneuploidy.

SCOPE OF THE REPORT:

This report studies the Preimplantation Genetic Testing market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Preimplantation Genetic Testing market by product type and applications/end industries. North America accounted for the largest share of the global preimplantation genetic testing market in 2017, followed by Europe. The large share in the North American region is mainly attributed to the rising number of IVF procedures (with decreasing fertility rates), significant adoption of genomic techniques, and the ongoing trend of replacing traditional genomic technologies with advanced and innovative genetic techniques (such as FISH and NGS). The Asia-Pacific region is expected to register the highest growth rate during the forecast period, due to the growing focus of players on emerging markets and improvements in healthcare infrastructure in these regions. The global Preimplantation Genetic Testing market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Preimplantation Genetic Testing.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
