Preloaded Intraocular Lens Injection System is a medical device used in cataract surgery to implant an artificial lens into the eye. This system comes with the intraocular lens pre-sterilized and pre-loaded into an injector, eliminating the need for manual lens handling by the surgeon or staff. It enhances surgical efficiency, reduces the risk of contamination or lens damage, and promotes consistent lens delivery into the capsular bag. The preloaded design also streamlines workflow in the operating room, supports better sterility standards, and can lead to improved patient outcomes by minimizing variability during lens implantation.
