## Abstracts

According to our (Global Info Research) latest study, the global Prenol 331 market size was valued at US\$ 429 million in 2025 and is forecast to a readjusted size of US\$ 579 million by 2032 with a CAGR of 4.5% during review period.

Prenol 331 (referring to 3-methyl-3-buten-1-ol, CAS No. 763-32-6) is a colorless, transparent, irritating, and flammable liquid. It is a key intermediate in the fine chemical industry, primarily used in the production of TPEG (isoprenol polyoxyethylene ether) to manufacture high-performance water-reducing agents. It also has applications in fragrance synthesis and other fields.

The upstream core materials include isobutylene and formaldehyde, which are condensed through the classic Prins reaction. The midstream involves the research and deep processing of high-purity isopentenol. The technological barriers lie in the efficient separation of isomers and the ultra-high purity distillation processes required for different applications. The largest downstream demand comes from cement water-reducing agents.

Global sales are projected to reach approximately 100,000 tons in 2025, with an average selling price of US\$4,125 per ton. The industry's gross profit margin is between 20% and 30%.
