According to our (Global Info Research) latest study, the global Preparative Peptide Purification Consumables market size was valued at US\$ 233 million in 2025 and is forecast to a readjusted size of US\$ 396 million by 2032 with a CAGR of 7.8% during review period.

In 2025, global sales volume of peptide preparative purification consumables is estimated at approximately 756 tons, with an average price of around 300 US dollars per kilogram. Peptide preparative purification consumables refer to key consumable materials used in preparative-scale separation, purification, polishing, and scale-up processes after peptide synthesis. These consumables are mainly used for crude peptide desalting, impurity removal, target peptide enrichment, purity improvement, and process scale-up. The product scope mainly covers preparative chromatography media and purification resins, packed preparative columns, prepacked columns, and other auxiliary consumables for preparative purification, with major applications in therapeutic peptide manufacturing, custom peptide preparation, peptide process development, and pilot-scale production.

The global peptide preparative purification consumables market is benefiting from the accelerated transition of peptide drugs from research and development to industrial-scale manufacturing. With the continued expansion of GLP-1 drugs, insulin analogues, antimicrobial peptides, peptide vaccines, and other complex modified peptide projects, the importance of crude peptide purification, impurity control, target peptide enrichment, and process scale-up is increasing. Compared with peptide synthesis consumables, the preparative purification consumables market is smaller in size, but it has higher quality barriers in commercial manufacturing, particularly in media selection, column

performance stability, batch-to-batch consistency, and scale-up compatibility.

In terms of product structure, preparative chromatography media and purification resins represent the core product category, while packed preparative columns and prepacked columns are important consumable formats in process development, pilot-scale production, and selected commercial manufacturing processes. Reversed-phase preparative chromatography remains the mainstream purification route for synthetic peptides, especially for GLP-1 peptides and hydrophobic modified peptides. Ion-exchange and mixed-mode chromatography are more commonly used for impurity control, polishing, and specific process optimization. As peptide molecules become more complex, single purification methods are increasingly insufficient to balance purity and yield, which will further drive demand for high-performance media and preparative columns.

From a competitive perspective, companies from Europe, the United States, and Japan still hold advantages in high-end preparative chromatography media, wide-pore reversed-phase materials, process-grade chromatography media, and branded preparative columns. Merck, Danaher, Waters, Agilent, Thermo Fisher, YMC, Tosoh, Mitsubishi Chemical, Nouryon, and DuPont have strong global supply capabilities. At the same time, Chinese suppliers are gaining momentum in chromatography media, purification resins, preparative columns, and domestic substitution. Companies such as NanoMicro, Sepax, Sunresin, Bestchrom, Welch Materials, NanoChrom, Acchrom, and Wepure are gradually entering the supply chains of pharmaceutical companies and peptide CDMOs.

Looking ahead, market growth will be driven not only by the increasing number of peptide drug pipelines, but also by the rising demand for stable, scalable, and validated purification solutions after commercial projects ramp up. Suppliers with capabilities in bulk media, packed preparative columns, process development support, and quality documentation are more likely to build long-term procurement relationships with pharmaceutical companies and peptide CDMOs. For new entrants, low-price competition alone is unlikely to be sufficient in high-end accounts; material performance stability, batch consistency, regulatory support, and scale-up experience will be the key differentiators.
