Abstracts

According to our (Global Info Research) latest study, the global Prepreg Carbon Fiber market size was valued at USD 9993.2 million in 2023 and is forecast to a readjusted size of USD 15250 million by 2030 with a CAGR of 6.2% during review period.

Prepreg is the common term for a reinforcing fabric which has been pre-impregnated with a resin system. This resin system (typically epoxy) already includes the proper curing agent. As a result, the prepreg is ready to lay into the mold without the addition of any more resin. In order for the laminate to cure, it is necessary to use a combination of pressure and heat.There are many fiber types that can be excellent candidates for the preparation of preimpregnated fibers.Prepreg Carbon Fiber refers to the Carbon Prepreg made of Carbon fiber.

The rising demand for carbon fiber prepreg in the end-user industries is the key factor driving the market growth during the forecast time. Furthermore, the increasing demand for fuel efficient cars, along with the flourishing investment in the renewable energy sector is considerably contributing to the development of the carbon fiber prepreg market. Among the various resin segments in carbon fiber prepreg market, the epoxy resin segment is leading and is anticipated to continue its dominance during the forecast period. The characteristics such as high strength to weight ratio and improved heat corrosion and moisture resistivity of epoxy resin makes them appropriate for applications in industries such as aerospace, defense, sports & leisure, and wind among others. Among the end use industries, the aerospace & defense is the starring segment, owing to high performance stability of carbon fiber prepreg than other conventional materials.
