Abstracts

Pre-preg is "pre-impregnated" composite fibers where a thermoset polymer matrix material, such as epoxy, is already present. The fibers often take the form of a weave and the matrix is used to bond them together and to other components during manufacture. The thermoset matrix is only partially cured to allow easy handling; this B-Stage material requires cold storage to prevent complete curing. B-Stage pre-preg is always stored in cooled areas since heat accelerates complete polymerization. Hence, composite structures built of pre-pregs will mostly require an oven or autoclave to cure.

SCOPE OF THE REPORT:

This report focuses on the Prepreg in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia-Pacific is expected to be the fastest-growing market for prepreg between 2018 and 2023. The growth in the wind energy industry, large investment by government in aerospace & defense, and new product developments by various leading players are a few factors leading to the growth of the market of prepreg in this region. China leads the market of prepreg in Asia-Pacific. Its consumption of prepreg has grown remarkably due to growth in the wind energy, sporting goods, and aerospace & defense industries.

The worldwide market for Prepreg is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
