The global Premix Packaging Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Premix is a homogeneous mixture made of multiple additives of the same type or multiple additives of different types in a certain proportion. Since the additive components account for a small proportion in the premix, most of them are measured in mg/ Calculated in kilograms or g/kg, the commonly used premix additive proportions are 1%-5%, which are mixed with multivitamins, trace elements, macro mineral elements, some protein feed non-nutritional additives and carriers. Premix is an important component of full-price compound feed. It is usually packaged in large bags. The packaging equipment can use 5kg packaging machine, 10kg packaging machine and conventional 25kg granular powder packaging machine to achieve quantitative packaging.
