According to our (Global Info Research) latest study, the global Prescription Delivery Service market size was valued at USD 136.7 million in 2023 and is forecast to a readjusted size of USD 385.6 million by 2030 with a CAGR of 16.0% during review period.

Prescription delivery is a service where people can get their prescribed medicines delivered at home. The precautions taken by prescription delivery services include proper storage of drugs, if the drugs require cold storage or refrigeration then the delivery should happen in correct temperature during transit. Prescription delivery services make sure that the pharmacy is responsible for the security of the medicines patient information until it is received by the user. The deliveries should be directly from the pharmacy to the patient without any stoppages and hindrance in between the process. The Prescription delivery work in just three steps. 1. Patient has to send the prescription. 2. The delivery is noted and confirmed by the Prescription delivery services. 3. The medication is safely delivered to your home. Commuting to a pharmacy isn't a viable option for those who need to avoid crowds to safeguard their health. A prescription delivery service lets you get same-day, next-day, or same-week shipping of medications. Prescription Delivery Service is the Home delivery. Home delivery is when a physical pharmacy — like CVS — delivers a medication to home. Some local pharmacies offer this option, and people can call or check online to see if your local pharmacy does. As the online sales of prescription medications surge, local pharmacies are adding a delivery service option to their business model. In this report, we only study the market size of healthcare products delivery service or the delivery service fee without the market size of the healthcare products. According to our research, many delivery services are free.
