## Abstracts

According to our (Global Info Research) latest study, the global Prescription Diet Dog Food market size was valued at US\$ 206 million in 2025 and is forecast to a readjusted size of US\$ 288 million by 2032 with a CAGR of 4.9% during review period.

Prescription Diet Dog Food, also categorized as Veterinary Diets or therapeutic pet foods, refers to specialized nutritional formulations engineered to manage specific medical conditions or pathological states in canines. Unlike standard over-the-counter kibble, these diets are developed through extensive clinical trials and nutritional science to serve as an adjunct to medical treatment. They work by precisely manipulating nutrient levels—such as restricting minerals to prevent urolithiasis, utilizing hydrolyzed proteins for dermatological sensitivities, or adjusting caloric density for metabolic disorders. Because of their targeted pharmacological-like effects, these foods must be administered under the direct supervision of a licensed veterinarian, as an inappropriate nutrient profile could be detrimental to a healthy dog's physiology. In 2025, global Prescription Diet Dog Food production reached approximately 10000 MT.
