According to our (Global Info Research) latest study, the global Prescription Migraine Medicine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. Headaches and migraines are common conditions affecting a significant portion of the population. The increasing prevalence of these conditions drives the demand for prescription headache medicines as individuals seek effective treatment options to manage their symptoms. While over-the-counter medications can provide relief for many individuals with mild headaches, there is a substantial population that experiences moderate to severe headaches or migraines that require stronger prescription medications. The unmet medical needs of this population drive the demand for prescription headache medicines.

Prescription migraine medicines are medications that require a doctor's prescription and are specifically designed to treat migraines. These medications are typically more potent and targeted in their approach to managing migraine symptoms.
