According to our (Global Info Research) latest study, the global Press Forging Machinery market size was valued at USD 9022.9 million in 2023 and is forecast to a readjusted size of USD 11440 million by 2030 with a CAGR of 3.4% during review period.

Forging is the operation where the metal is heated and then a force is applied to manipulates the metals in such a way that the required final shape is obtained. Forging is generally a hot working process though cold forging is used sometimes.

Press forging works by slowly applying a continuous pressure or force, which differs from the near-instantaneous impact of drop-hammer forging. The amount of time the dies are in contact with the work piece is measured in seconds (as compared to the milliseconds of drop-hammer forges). The press forging operation can be done either cold or hot.

The main advantage of press forging, as compared to drop-hammer forging, is its ability to deform the complete work piece. Drop-hammer forging usually only deforms the surfaces of the work piece in contact with the hammer and anvil; the interior of the work piece will stay relatively unreformed. Another advantage to the process includes the knowledge of the new part's strain rate. We specifically know what kind of strain can be put on the part, because the compression rate of the press forging operation is controlled.

Global Forging Presses key players include Schuler, Komatsu, Aida, JIER, Yangli Group, etc. Global top five players hold a share about 30%.

China is the largest market, with a share about 60%, followed by Japan and South Korea, having a total share about 15 percent.

In terms of product, Mechanical is the largest segment, with a share about 75%. And in terms of application, the largest application is Automotive, followed by Hardware Tools, General Machine, Home Appliances, etc.
