Abstracts

The global Press Molding Machine market size is expected to reach \$ 2253 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

Press Molding Machines are industrial forming equipment that use pressure, heat, and molds to shape rubber, plastic, thermoset, composite, and powder-based materials into finished parts. The machine places pre-measured material into a mold cavity, then applies pressure and temperature to complete filling, curing, densification, and final forming. It is widely used in automotive components, rubber products, electrical insulation parts, packaging closures, medical products, composite parts, and industrial molded components. The industrial chain of Press Molding Machines includes upstream suppliers of hydraulic systems, servo motors, heating plates, molds, temperature controllers, pressure sensors, PLC systems, safety devices, frame structures, and sealing components. Midstream manufacturers integrate press structures, mold clamping units, heating systems, pressure control systems, automation modules, and safety protection systems into complete equipment. Downstream applications include rubber product manufacturing, plastic parts, composite components, automotive parts, electrical insulation products, packaging closures, medical consumables, and industrial molded products. Supporting services include installation, mold matching, process optimization, equipment maintenance, spare parts supply, and operator training. In 2025, global Press Molding Machine production reached approximately 12,083 units, with an average global market price of around US\$120,000 per unit. The gross profit margin of major companies in the industry is between 30%-50%. In 2025, the global production capacity of press molding machines was approximately 16,782 units.

The Press Molding Machine market is driven by demand from automotive components, rubber products, composite materials, electrical insulation parts, packaging closures,

and medical molded products. Compared with injection molding, press molding is more suitable for thermoset materials, rubber, large parts, low-stress molding, and applications requiring dimensional stability and strong mechanical performance. Manufacturers are increasingly adopting servo-hydraulic systems, automated loading and unloading, multi-cavity molds, precise temperature control, and energy-saving heating technologies to improve productivity and reduce labor costs. Demand is also supported by lightweight materials, electric vehicle components, sealing products, and composite structural parts. In emerging markets, replacement of manual or semi-automatic presses with automated press molding systems continues to create growth opportunities. Overall, the market is expected to grow steadily, supported by industrial upgrading and diversified molded component applications.

This report studies the global Press Molding Machine production, demand, key manufacturers, and key regions.
