Abstracts

The global Pressed Copper Foil market size is expected to reach \$ 975 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Global production of rolled copper foil reached 75,000 tons in 2025, with an average selling price of US\$9,000 per ton. The global annual production capacity of rolled copper foil was approximately 120,000 tons, with a gross profit margin of approximately 20.7%. Rolled copper foil is a thin, sheet-like material produced by thinning and controlling the thickness of copper through a rolling process. It is commonly used in electronics, energy, and other fields. Its core characteristics are high conductivity, good flatness, and controllable thickness uniformity, with thicknesses typically ranging from tens to hundreds of micrometers. The manufacturing process of rolled copper foil usually involves multiple rounds of rolling of copper ingots or strips, annealing to restore plasticity, and subsequent surface treatment and slitting/winding, aiming to obtain stable thickness, flatness, surface quality, and mechanical properties. The upstream of the rolled copper foil industry chain includes copper strip, annealing gases, and surface treatment chemicals; the midstream consists of rolled copper foil manufacturers; and the downstream is mainly used in consumer electronics, new energy vehicles, and mobile communications industries.

Currently, the rolled copper foil market maintains steady growth, driven by downstream demand from new energy, electronic information, and automotive electronics industries, especially the increasing demand for high-quality copper foil from applications such as lithium-ion batteries and capacitors. Global production capacity continues to concentrate in Asia, with leading manufacturers increasing their output per unit area through capacity expansion, thinner profiles, and advanced surface treatments. At the same time, they face pressure from fluctuating raw material prices, increasingly stringent environmental regulations, and price competition from capacity expansion on the supply

side.
