A pressed in place(PIP) seal gasket is a sealing element that is embedded in a sealing groove under the action of external force by combining a highly elastic material with a metal frame. It is characterized by easy installation, good sealing performance, wear resistance and anti-aging. When subjected to axial pressure, this seal can automatically adjust its shape to fill the microscopic bumps on the sealing surface, effectively preventing medium leakage, and has excellent sealing effect and wide adaptability. Its superiority is reflected in its tolerance to pressure and temperature changes. It can maintain stable sealing performance even in extreme environments, and is easy to replace and maintain, greatly reducing operating costs and difficulty of use.
