Pressed plastic bonded magnets are magnetic materials made by mixing magnetic powders (such as ferrite or NdFeB) with plastic binders and compressing the mixture under high pressure at room temperature. Compared to traditional sintered magnets, they offer advantages such as the ability to form complex shapes, high dimensional accuracy, high production efficiency, and reduced need for post-processing. These magnets are widely used in applications like micro motors, sensors, automotive electronics, and office automation devices, particularly where lightweight and precision components are required.
