Abstracts

The global Pressure Compensation Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In enclosures and housings with a high protection class, differential pressure happens due to internal and external temperature changes. In the event of negative pressure, dust and humidity can be drawn into the enclosure through the seals on the doors. This can cause condensation when the air in the enclosure cools down. The easy-to-fit pressure compensation device enables pressure compensation with protection class IP66. Additionally, the watertight membrane inside the pressure compensation device allows humidity to escape from the cabinet at over pressure, while preventing water, humidity or dirt intrusion at under pressure.

This report studies the global Pressure Compensation Device production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Pressure Compensation Device, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
