Abstracts

The global Pressure Indicating Film market size is expected to reach \$ 202.4 million by 2029, rising at a market growth of 8.4% CAGR during the forecast period (2023-2029).

Fujifilm is the largest player of pressure indicating film, accounting for over 80%. Other key manufacturers include Sensor Products Inc, Kumlong International, Lucky Innovative, Shanghai SOCO, HMD, JKMTS and RoadGreen.

Japan ranks first among the producers by region, with a share about 83%, followed by China, which makes up around 10%.

Top one market by region is Asia-Pacific, holding a share over 60%. North America also gains a high share of 20%.

There are six types of pressure indicating films, in which 3LW and 4LW type gains the highest share of 54% around. In terms of application, PCB and electronics is the largest segment, with a share over 25%.

Because of the rapid growth of downstream applications, the market of pressure indicating film is also expected to soar.

Pressure Indicating Film is a Mylar-based sensor film that reveals the distribution and magnitude of pressure between any two contacting, mating, or impacting surfaces.

Pressure Indicating Film can also be called as Pressure Sensitive Paper. It is a paper/film coated with an acid developer on the front and microcapsules containing a colorless cryptic dye on the back. When the paper is overlapped, the microcapsules are

ruptured due to mechanical pressure, and the colorless cryptic dye overflows and then develops color when exposed to acid, then forming an image. These products are mostly used for pressure measurement.
