The global Pressure Measurement Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A pressure sensor is a transducer or instrument that converts an input mechanical pressure in gases or liquids into an electrical output signal. A pressure transducer consists of a pressure-sensitive element that can measure, detect or monitor the pressure being applied and electronic components to convert the information into an electrical output signal. Pressure is defined as the amount of force (exerted by a liquid or gas) applied to a unit of "area" ($P=F/A$), and the common units of pressure are Pascal (Pa), Bar (bar), N/mm² or psi (pounds per square inch). Pressure sensors often utilize piezoresistive technology, as the piezoresistive element changes its electrical resistance proportional to the strain (pressure) experienced.

This report studies the global Pressure Measurement Sensor production, demand, key manufacturers, and key regions.
