Abstracts

According to our (Global Info Research) latest study, the global Pressure Reducing and Desuperheating Stations (PRDS) market size was valued at US$ 2241 million in 2024 and is forecast to a readjusted size of USD 3142 million by 2031 with a CAGR of 5.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The Pressure Reducing and Desuperheating Station (PRDS) is a unit that conditions steam from a Main System (Boiler) to an Auxiliary Steam source of supply by reducing steam Pressure and Temperature using a Pressure Control Valve and a Temperature Control valve. After Pressure Reduction is done, the steam is then allowed to pass through the Desuperheating station to lower the temperature of the steam to the required value.
