## Abstracts

According to our (Global Info Research) latest study, the global Pressure Safety Valve market size was valued at USD 46 million in 2023 and is forecast to a readjusted size of USD 60 million by 2030 with a CAGR of 3.9% during review period.

Industrial valves comprise many products that manage the flow of gases and fluids in industrial applications. Among these, pressure safety valves are designed for process control, process safety, original equipment manufacturer (OEM) applications, and others across several end-user industries.

These valves prevent the over-pressurization of pressure-based equipment and machineries by sensing and subsequently guiding the additional surge in pressure towards alternate passages or into atmosphere. As a result, they are used in steam boilers, heating boilers, pressure-based vessels and systems, OEM applications, industrial machineries, and other applications. The valve design and construction are varied to have a manual or automatically-operated opening and closing of valves at working settings during the system operation.

The Global Info Research report includes an overview of the development of the Pressure Safety Valve industry chain, the market status of Oil and Gas (Spring Operated Valve, Pilot Operated Valve), Power and Energy (Spring Operated Valve, Pilot Operated Valve), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Pressure Safety Valve.
