Abstracts

The global Pressure Vessels market size is expected to reach \$ 105530 million by 2032, rising at a market growth of -0.1% CAGR during the forecast period (2026-2032).

Pressure Vessels is a closed container designed to hold gases or liquids at a pressure substantially different from the ambient pressure.

The pressure differential is dangerous, and fatal accidents have occurred in the history of pressure vessel development and operation. Consequently, pressure vessel design, manufacture, and operation are regulated by engineering authorities backed by legislation. For these reasons, the definition of a pressure vessel varies from country to country, but involves parameters such as maximum safe operating pressure and temperature, and are engineered with a safety factor, corrosion allowance, minimum design temperature (for brittle fracture), and involve nondestructive testing, such as ultrasonic testing, radiography, and pressure tests, usually involving water, also known as a hydro-test, but could be pneumatically tested involving air or another gas.

Global Pressure Vessels key players include CB&I, IHI Corporation, Mitsubishi Heavy Industries, etc. Global top three manufacturers hold a share over 3%.

North America is the largest market, with a share over 30%, followed by Europe and Asia-Pacific, both have a share about 55 percent.

In terms of product, Titanium is the largest segment, with a share about 50%. And in terms of application, the largest application is Petrochemical, followed by Oil & Gas, Coal Chemical, Nuclear Power, Non-ferrous Metal, etc.

This report studies the global Pressure Vessels production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Pressure Vessels and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
