## Abstracts

The global Pressure Washer market size is expected to reach \$ 4116.5 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Global key players of Pressure Washer include Karcher, Nilfisk, Stihl and Briggs & Stratton, etc. The top four players hold a share over 30%. Europe is the largest market, has a share about 37%. In terms of product type, Electric Motor is the largest segment, occupied for a share of about 58%, and in terms of application, Residential has a share about 56 percent.

Pressure Washers is a high-pressure mechanical sprayer used to remove loose paint, mold, grime, dust, mud, and dirt from surfaces and objects such as buildings, vehicles and concrete surfaces. The volume of a pressure washer is expressed in gallons or liters per minute, often designed into the pump and not variable. The pressure, expressed in pounds per square inch, pascals, or bar (deprecated but in common usage), is designed into the pump but can be varied by adjusting the unloader valve.

A typical Pressure Washers has electrical powered motor that powers a water pump. The pump accelerates the water, supplied from a garden hose, to produce high pressure. The washer is hooked to a high pressure-rated hose. At the end of the hose is a water gun that looks similar to the pressure guns used at car washes. When the trigger is pulled, the water mixes with the air and comes out of the nozzle.
