Pressure sintering silver paste is an advanced material that applies pressure during the sintering process. It achieves metallurgical bonding between silver particles by mixing silver particles and an organic binder under pressure and subjecting the paste to high-temperature treatment. This sintering method gives the sintered body a higher density and bonding strength due to the pressure it applies, effectively improving electrical and thermal conductivity. While improving the reliability and stability of electronic devices, pressure sintered silver paste can also maintain excellent performance in high-temperature environments. It is an ideal interconnect material in the fields of power electronic packaging and high-end electronic manufacturing. Its unique pressure sintering process ensures the product's superiority in precision and performance, meeting high-demand application scenarios.
