Abstracts

The global Pressurizer for Nuclear Power market size is expected to reach \$ 749 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

The nuclear power plant pressurizer is the core pressure control component of the primary coolant system in a pressurized water reactor (PWR). It maintains the absolute pressure of the coolant system to prevent the high-temperature, high-pressure coolant from vaporizing within the reactor core, while also accommodating volumetric fluctuations caused by temperature changes and providing overpressure protection. In 2025, global Pressurizer for Nuclear Power production reached approximately 52 units, with an average global market price of around 9000 K US\$/Unit. The production capacity of Pressurizer for Nuclear Power reaches 70 units, and the industry's gross profit margin is approximately between 20% and 40%.

Driven by the accelerating global transition to low-carbon energy and the continued growth of installed nuclear power capacity, the market for nuclear power pressurizers has maintained steady development. Ongoing new construction projects for nuclear power units are fueling rising demand for pressurizers, which serve as critical components of the primary coolant circuit within the nuclear island. Meanwhile, a large number of operating nuclear power units in Europe, the United States, Japan and other regions are entering the life extension operation and equipment upgrade stage, which is driving the continuous expansion of the pressurizer replacement and renovation market. In recent years, the accelerated commercialization of Small Modular Reactor (SMR) and advanced nuclear reactor technologies has created new market opportunities for nuclear power pressurizers. Furthermore, continuous technological advancements spanning nuclear-grade materials, large-scale forging, automated

welding, intelligent inspection, and digital design?have enhanced product safety, reliability, and manufacturing efficiency. Driven by heightened national energy security needs, increased investment in nuclear power, and rising localization rates for nuclear equipment, the market for nuclear power pressurizers will continue to evolve toward larger capacities, higher reliability, extended service life, intelligent manufacturing, and modular design.
