Print Quality Inspection System is a vision-based system on the market capable of defect detection, barcode verification and ISO grading capabilities, which can find the common defects such as ink splashing, stains, stripes and foreign matter to correct production and reject bad copies in the printing process. There are also inspections on the market that can check the print quality and content on each page, including color, position, outline, smear, jetting, data verification, etc. Print Quality Inspection System continuously measures and analyses the production and compares the actual printed copies to the adjusted printed copies. It is essentially analysing two different market include labels and packaging.

Market Drivers

1. Increasing Demand for Product Quality: Consumers are demanding higher standards for product appearance and consistency, driving manufacturers to adopt more advanced technologies to ensure that the print quality of each product meets high standards. High-quality products enhance brand image and increase customer satisfaction.

2 Automation and Intelligence:The promotion of Industry 4.0 concepts is accelerating the transformation of manufacturing towards greater automation and digitalization. Visual inspection equipment integrated with AI algorithms can achieve higher accuracy
