The global Print Server market size is expected to reach \$ 7928 million by 2032, rising at a market growth of 2.0% CAGR during the forecast period (2026-2032).

A print server, or printer server, is a device that connects printers to client computers over a network. It accepts print jobs from the computers and sends the jobs to the appropriate printers, queuing the jobs locally to accommodate the fact that work may arrive more quickly than the printer can actually handle. Ancillary functions include the ability to inspect the queue of jobs to be processed, the ability to reorder or delete waiting print jobs, or the ability to do various kinds of accounting, such as counting pages, which may involve reading data generated by the printers.
