The global Printing Blanket market size is expected to reach \$ 1093.6 million by 2029, rising at a market growth of 4.2% CAGR during the forecast period (2023-2029).

Global key producers of printing blankets are ContiTech, Flint Group, Fujikura Rubber, Habasit, Meiji Rubber & Chemical, Chiorino SpA, Kinyosha, and others. The top three producers together account for more than 75% of the market share, with the largest producer being ContiTech, with a 35% market share. Production sites are mainly located in the United States, Europe, China, Japan, India, etc., with Europe having the largest market share. In terms of product categories, UV blankets and air cushion blankets both hold more than 40% of the market share, while traditional blankets only account for 10% of the market share. In terms of its applications, the packaging industry is its largest downstream sector, accounting for 45% of the market share; it also has applications in the commercial printing and newspaper industries.

Printing Blanket, the cover of the transfer cylinder on an offset press, is an integral part of the liner. Printing Blanket A composite product consisting of a rubber coating and a substrate (substrates can range from paper to aluminum sheet to textiles to any other substrate such as plastic or metal.) for indirect lithography, transferring ink from the printing plate onto the substrate. During the manufacturing process, the fabric and rubber are combined using thermal and chemical energy in a precisely controlled process, and different compounds and structures give Printing Blankets different properties on the press. In the early days, Printing Blanket was made of pure rubber, and the image quality was much better than the lithographic printing plates used at the time, but it also had its drawbacks. The advent of synthetic rubber in the 1930s eliminated the problems inherent in the pure rubber previously used. Today, blankets are made by using different synthetic rubbers to increase their resistance. The main

synthetic rubbers used today are Buna N, Neoprene as well as NVR (nitrile butadiene rubber), and EPDM (ethylene propylene diene rubber) to increase the durability of the blanket. To provide extra strength to the blanket, a backing with fabric or metal is provided.
