Abstracts

According to our (Global Info Research) latest study, the global Printing Machine market size was valued at USD 16170 million in 2023 and is forecast to a readjusted size of USD 18830 million by 2030 with a CAGR of 2.2% during review period.

With changing requirements of commercial printing, manufacturing of printing machines is slated to become more complex. Stringent environmental regulations are pressurizing the printing machine manufacturers towards optimizing the use of inks containing VOCs.

In 2017 and beyond, the demand for offset lithography machines will be the highest, compared to other product-types, in the global market. With respect to digital printing machines, offset lithography machines offer competitive advantage across multiple parameters. Firstly, the interfacial surface properties of offset lithography machines make the printing surfaces ink-absorbent and the non-printing surfaces of the machine ink-repellent. This saves additional costs on maintenance, which makes it the most economical printing machine in the global market. Furthermore, provisions for quality control and efficiency of sub-machineries such as dampening system and ink system enable high-quality, consistent printing through a lithographic process.

The Global Info Research report includes an overview of the development of the Printing Machine industry chain, the market status of Clothing/Garment (Web offset lithography, Flexography), Paper (Web offset lithography, Flexography), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Printing Machine.
