A prism sheet is an optical film designed to enhance the brightness and clarity of displays by directing and focusing light. Composed of transparent materials such as polycarbonate or acrylic, it features a surface with micro-prismatic structures arranged in a precise pattern. These prisms refract and redirect light to concentrate it in specific directions, improving screen luminance and reducing energy consumption in backlit displays. Key features of prism sheets include high optical efficiency, durability, and compatibility with various display technologies. They are widely used in applications such as LCD screens, LED displays, smartphones, and television panels, enabling thinner, brighter, and more energy-efficient devices.
