According to our (Global Info Research) latest study, the global Private Network Antenna market size was valued at US\$ 449 million in 2025 and is forecast to a readjusted size of US\$ 629 million by 2032 with a CAGR of 5.0% during review period.

A Private Network Antenna is a specialized antenna designed to facilitate wireless communication within a private network. Private networks are typically used by organizations, enterprises, or individuals to create a dedicated and secure communication infrastructure, separate from public networks like the internet or cellular networks. These antennas are crucial for ensuring reliable and efficient wireless connectivity within the network's coverage area.

The commercial use of 5G technology has not only improved the performance requirements of private network antennas, but also broadened their application scenarios, such as smart cities and intelligent transportation, thereby accelerating the development of the private network antenna industry. At the same time, the rapid growth of IoT devices has also brought new growth opportunities to the private network antenna industry, especially in the fields of government and industrial IoT.

Technological innovation and industrial upgrading will become the core driving force for the development of the industry. China's communication antenna industry will continue to invest in research and development, promote the application of new materials and new processes in antenna technology innovation, and actively develop antenna technology that adapts to high-frequency band transmission. In addition, the industry will strengthen the collaborative cooperation of the industrial chain, build a complete industrial chain ecosystem, and improve overall efficiency and quality by integrating industrial chain resources.
