## Abstracts

According to our (Global Info Research) latest study, the global Probe Card for Advanced Packaging market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Traditional packaging usually refers to a process in which wafers are first cut into individual chips and then packaged. Advanced packaging such as wafer-level chip-scale packaging is a technology that packages and tests the entire wafer and then cuts it into individual finished chips. The size of the packaged chip is the same as that of the bare chip. The probe cards produced by some domestic and foreign manufacturers are only used before packaging. The main goal is to establish electrical connections between test equipment and wafer circuits so that these circuits can be verified and tested before cutting and packaging. The manufacturers of probe cards used in advanced packaging are counted here to clearly illustrate the manufacturers who produce probe cards that can be applied to WLCSP, SIP and other technologies.

The Global Info Research report includes an overview of the development of the Probe Card for Advanced Packaging industry chain, the market status of WLCSP (MEMS Probe Card, Vertical Probe Card), SIP (MEMS Probe Card, Vertical Probe Card), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Probe Card for Advanced Packaging.
