Abstracts

Micropositioners, also referred to as, positioners, manipulators, micromanipulators and probe heads, position the probe arm and probe tip in the die. These devices are truly the workhorses of the modern probe station. Micropositioners are held in place by magnets, vacuum, or, in special applications, fixed in place with bolts.

All micropositioners are equipped with mechanisms to adjust the probe tip in three planes, X, Y, and Z. Some micropositioners also have a roll adjustment to align the angle of the probe tip for RF or Optical measurements.

This report studies the global Probe Station Micropositioners production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Probe Station Micropositioners, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2021 as the base year.
