According to our (Global Info Research) latest study, the global Probenazole market size was valued at US\$ 1986 million in 2024 and is forecast to a readjusted size of USD 2632 million by 2031 with a CAGR of 4.1% during review period.

Probenazole is a fungicide known for its high effectiveness in inducing disease resistance in plants. It is particularly effective against diseases like rice blast, white leaf blight, bacterial rice blight, and ear blight. It's used on various crops, including broccoli, cucumbers, lettuce, cabbage, and leeks, as well as on rice to prevent rice blast. Conditions such as low temperatures, lack of sunlight, and high humidity can heighten disease risk. However, probenazole is effective against these challenges.

Initially developed for rice blast, probenazole has also proven effective against bacterial blights in cucumbers, cruciferous vegetables, leeks, etc. Its long-lasting pest control effect reduces labor and enhances early control efficacy. Rice plants absorbing probenazole exhibit resistance to all types of blast diseases, inhibiting infection.
