## Abstracts

One of the major changes in the food and beverage industry is reducing the number of packages (mostly non-recyclable) to reduce packaging waste without compromising food safety and hygiene. This has led to an increased demand for polyolefin plastic packaging films. Changes in lifestyle, population growth in the middle class, and increased consumption of packaging products will drive the packaging industry, which in turn may support the growth of the slippery additive market. China's demand for ready-to-eat foods, convenience foods, and processed and semi-processed foods is growing. Consumers prefer quality and trustworthy products, increasing demand for imported food and beverage products. This increases the pressure on household food and food. Beverage manufacturers produce products that are safe and easy to package. These factors are expected to drive the region's slippery additive market.
