Process Chemicals for Water Treatment are organized into three general areas: physical methods, chemical methods, and energy intensive methods. Chemical methods of treatment rely upon the chemical interactions of the contaminants we wish to remove from water, and the application of chemicals that either aid in the separation of contaminants from water, or assist in the destruction or neutralization of harmful effects associated with contaminants. Chemical treatment methods are applied both as stand-alone technologies and as an integral part of the treatment process with physical methods. In this report, we mainly research water and wastewater treatment chemicals including Ph adjusters & softeners, flocculants & coagulants, corrosion inhibitors, Scale Inhibitors/Dispersants, biocides & disinfectants and others.

The key players of Process Chemicals for Water Treatment include Solenis, SNF Group and Ecolab, etc. The top three players hold a share over 22%. Asia-Pacific is the largest market, has a share about 34%.
