A process mass spectrometer is a mass spectrometer specifically designed for real-time monitoring and analysis of gas composition and concentration in industrial processes. It can continuously measure various gas mixtures online and provide fast and accurate chemical composition analysis. It is commonly used in chemical, pharmaceutical, petroleum, environmental monitoring and other fields. Process mass spectrometers help companies optimize production processes, improve product quality, reduce emissions and ensure safety by measuring the mass/charge ratio (m/z) of gas molecules. Its design is usually highly stable and durable to cope with harsh industrial environments.
