Abstracts

During the fractional distillation of crude oil, the heated oil fraction is removed to derive process oils from it. Process oils are more volatile than gasoline and are mixtures of naphthenic, paraffinic, and aromatic compounds in varying proportions. Lubricants play a crucial role in sectors such as automotive, aviation, manufacturing, and marine. They are used for the maintenance of both new and old machines and equipment to reduce friction, which increases over time because of the wear and tear of working surfaces.

SCOPE OF THE REPORT:

This report focuses on the Process Oil in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia-Pacific is estimated to be the largest market for process oils in 2018 and is projected to witness the highest growth between 2018 and 2023. The high growth in emerging economies has made Asia-Pacific a lucrative market for the manufacturers of process oils. The growth of the tire and rubber industries in China and India has resulted in the high consumption of process oils in these countries in recent years.

The worldwide market for Process Oil is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
