According to our (Global Info Research) latest study, the global Process Pilot Burners market size was valued at US\$ 438 million in 2024 and is forecast to a readjusted size of USD 647 million by 2031 with a CAGR of 5.4% during review period.

The process pilot burner is a key component used to ignite the main burner or heating equipment in industrial combustion systems. It is widely used in boilers, furnaces, gas turbines and various heating devices. It ensures that the mixture of fuel and air can be ignited quickly and safely by generating a stable small flame. The process pilot is designed to continuously provide a stable flame and reliably ignite the main burner even in harsh environments. Its flame monitoring system (such as ultraviolet or infrared sensors) ensures the presence of the flame. If the flame is accidentally extinguished, the control system will immediately cut off the fuel supply to prevent the accumulation of unburned gas and ensure safety.
