Abstracts

The global Product Carbon Footprint Certification market size is expected to reach \$ 1372 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

The product carbon footprint certification process includes carbon footprint accounting, certification, the development and implementation of an emissions reduction plan and the publication of a label. The carbon label, which is the hallmark of certification, shows the emission reduction commitments to be completed within 2 years.

The increasing demand for product carbon footprint certification is driven by a combination of factors, including increasingly stringent global green trade barriers, mandatory requirements for emissions reduction in the supply chain by large brands, increased consumer preference for low-carbon products, the promotion of carbon labeling systems in various countries, the intrinsic motivation of enterprises to improve their ESG performance and market competitiveness, and the need to support scientific carbon targets and the credibility of green marketing. At the same time, the widespread adoption of digital carbon management tools has lowered the certification threshold and accelerated the widespread application of this service in the manufacturing and consumer goods sectors.
