## **Abstracts**

The global Product Quality and Safety Traceability Solution market size is expected to reach \$ 29757 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

Product quality and safety traceability solutions refer to a systematic technical solution that uses the Internet of Things (IoT), identification coding, data collection systems, and information platforms to record, correlate, and visualize data throughout the entire process of a product, from raw material procurement, production and processing, warehousing and logistics to sales and use. This enables each product to have the capability of 'traceable origin, traceable destination, and accountable responsibility,' thereby achieving quality control, risk warning, recall management, and compliance supervision. Its essence is to build a trusted data system that spans the entire lifecycle of the supply chain using digital means.

Against the backdrop of continuously increasing global demands for food safety, drug regulation, cross-border trade compliance, and brand anti-counterfeiting, product quality and safety traceability solutions are upgrading from 'compliance tools' to 'supply chain digital infrastructure.' With the integrated application of IoT, blockchain, cloud computing, and AI technologies, traceability systems will evolve from single-point recording to a real-time data platform across the entire chain. This will not only be used for supervision and risk control but will also empower enterprises to achieve refined operations, build brand trust, and optimize the supply chain. In the future, its penetration rate will continue to increase in the food, pharmaceutical, agricultural, and high-end manufacturing sectors, becoming an important component of the digital economy and the industrial internet.
