Abstracts

According to our (Global Info Research) latest study, the global Programmable Electronic Load market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Programmable electronic loads can emulate either AC or DC loads. DC loads are used when testing DC power supplies such as battery chargers, converters, fuel cells, batteries, telecommunications rectifiers, and the like. A programmable AC electronic load provides optimum precision when compared with a traditional resistive load bank, which typically only operates at power factor unity.
